ICOM ID-1 Power

On the rtx Icom ID-1 we have 10 Watt output in 1200 Mhz band. The hybrid final works well up to 18, 20 Watt. It is the same circuit that usually works on ATV final on in SSB unit.

If you want to have a little more power on your ID-1, it is very easy:

- open your rtx on lower side, thought the only one screw;
- Near the rear panel, you will find a metallic trimmer, with writing "POW"

- With your power meter and dummy load, register the output as you like.

Please, note that that trimmer change the BIAS voltage on hybrid final..... !! It is better to stay at 12, 14, 15 watt....
no more !
